

The Product-Builder Prompt Pack

Six AI prompts for building faster, solo, and without wasting a build cycle. Copy, drop in your details, and go.

Inside:

- 01** The MVP Cutter
- 02** The Assumption Stress-Test
- 03** The Stack Decision
- 04** The Launch Readiness Audit
- 05** The Pricing Sanity Check
- 06** The Bug Triage Assistant

PROMPT 01

The MVP Cutter

I'm building [product idea] and tempted to add everything. Force me to choose ONE core user problem and ONE core action that solves it. Cut every feature that isn't required for that single loop, and tell me exactly what to build first.

HOW TO USE IT

Use this before you write a single line of code — it stops scope creep at the idea stage, not after you've built the extra features.

PROMPT 02

The Assumption Stress-Test

Here's my product idea: [describe it]. List the 5 riskiest assumptions I'm making about users, pricing, or demand. Rank them by how much damage being wrong would cause, and give me the fastest way to test the top 2 before I write more code.

HOW TO USE IT

Run this weekly during early build. The goal isn't validation — it's finding out what would actually kill the product before it ships.

PROMPT 03

The Stack Decision

I'm building [product type] as a solo founder with [X hours/week] and [budget]. Recommend a stack optimised for shipping fast, not scale I don't have yet. Flag anything I'd need to rebuild later and whether that trade-off is worth it.

HOW TO USE IT

Optimise for your constraints, not for the stack you'll wish you had at 100,000 users. You can rebuild later — you can't get the time back now.

PROMPT 04

The Launch Readiness Audit

I'm planning to launch [product] on [date]. Act as a brutally honest co-founder and list every non-negotiable I'm likely missing — legal, payments, support, security — before real users touch it. Rank each as blocks-launch or can-wait.

HOW TO USE IT

Run this 1-2 weeks before launch, not the night before. Give yourself enough runway to actually close the blocks-launch items.

PROMPT 05

The Pricing Sanity Check

I'm about to price [product] at [price]. Pressure-test this against my costs, my competitors, and what my target user pays for alternatives today. Tell me if I'm underpricing out of fear, and give me one number I could defend to a room of skeptics.

HOW TO USE IT

Most solo builders underprice out of fear, not logic. This prompt exists to catch that pattern before it becomes your default.

PROMPT 06

The Bug Triage Assistant

I have [X] open bugs and [Y hours] before I ship. Here's the list: [paste bugs]. Sort them into ship-blocking, visible-but-tolerable, and cosmetic. Tell me which 3 to fix first — and which I should knowingly ship broken.

HOW TO USE IT

Shipping with known, ranked issues beats missing a launch date chasing perfection. Decide what you're shipping broken — on purpose, not by accident.

Want help actually building it?

These prompts get you unstuck. If you want a second set of eyes on the whole build – product strategy, MVP scoping, or a full end-to-end build – that's what we do at Aurum Digital Consulting.
